Health Care

***Cleaning sensitive environments.
Reliably and safely!***

When cleanliness alone is not enough

In the healthcare sector, cleanliness and hygiene are vital. The requirements for cleaning are correspondingly high. It must be carried out in compliance with special hygiene regulations and the professional use of cleaning agents and disinfectants. The compact, manoeuvrable Scrubmaster scrubber-driers achieve excellent cleaning results with high efficiency. Equipped with options such as the antibacterial tank feature **Hako-AntiBac®** and tools for disinfection, Hako scrubber-driers provide increased hygiene and make a valuable contribution to health protection.

Benefits for the medical sector:

- Compact, manoeuvrable machines with low operating noise thanks to Silent-Mode
- Innovative solutions for optimal results and improved hygiene, such as Hako-AntiBac® and Hako-AquaControl
- Longer running times with the quick-charge technology Hako-DaytimeCleaning
- Only one machine for cleaning and disinfection thanks to additional tools
- Maximum machine availability thanks to Hako's reliable 24/7 service
- Everything from a single source: from procurement to complete solutions with full service and Hako-Fleet-Management

Options for more efficiency

Excellent cleaning results are the ultimate goal. But the way to get there is also crucial. That's why we provide many options for greater efficiency and ease of use. For example, with the on-board dosing system, which optimally matches the addition of cleaning agents to the amount of water supplied during the cleaning process and thus minimises the costs for cleaning chemicals. Or with the toolbox, which makes it easier for cleaning staff to organise and access additional working materials.

Clean performance

The antibacterial tank feature **Hako-AntiBac®** protects the plastic material and ensures reduced fungal and bacterial development in the tank system. This ensures high levels of hygiene in the machine with little cleaning effort. With Hako-AquaControl, up to 50 % water can be saved during operation, with the additional benefit of ensuring fewer interruptions for emptying and filling the tanks.

Reliable, even when things get hectic

Time and space are often in short supply in the hectic operations of clinics, care facilities and laboratories. In addition, the areas to be cleaned are constantly frequented by patients, visitors or staff. Hako cleaning technology is so efficient, reliable and quiet that it does not interfere with ongoing operations. And it is so user-friendly that cleaning tasks can be completed in much less time with particularly thorough results.

Optimise deployment

With Hako-Fleet-Management, you can deploy your cleaning fleet more cost- and resource-efficiently. The view.X.live module transmits all relevant information and operating data in real time – and thus supports you in keeping performance records.

All-round worry-free solutions for the healthcare sector

For facilities in the medical sector, the well-being of patients is paramount. Hako supports this objective, for example, with 650 service technicians located all across Europe and equipped with a GPS-controlled deployment planning tool, who ensure maximum availability of the machines around the clock. And if the worst comes to the worst, our efficient spare part logistics system delivers original spare parts directly overnight. With the online-based tool Hako-Fleet-Management, we enable transparent, optimised deployment of the cleaning fleet and the keeping of performance records. For greater flexibility and cost-effectiveness, we offer attractive rental and leasing options – optimally tailored to our customers' needs.

We take care of your individual requirements: with excellent customer service, digital services and attractive procurement alternatives.

Autonomous technology helps

To enable cleaning staff to concentrate fully on cleaning and disinfecting frequently used surfaces and thus potential sources of infection, autonomous cleaning technology can be used to assist with floor cleaning. The autonomous cleaning machine RoboScrub has already proven its performance capability – with high reliability, efficiency and safety.
