Scrubmaster
Walk-behind scrubber-driers

Excellent mobility for maximum cleanliness

Scrubmaster B5 | B8 | B12 | B25 | B35 | B50 | B70 | B75 i | B90 CL

Compact and manoeuvrable

From the dynamic machine for cleanliness in every corner to the hygiene specialist for demanding work environments to the autonomous cleaning system providing the independent and safe execution of cleaning tasks: Hako's walk-behind scrubber-driers ensure the best cleaning results. With a wide range of working widths, high area outputs and numerous options for more working comfort, efficiency and hygiene, we offer the right solution for every application.

A whole series of benefits

Ease of use, ergonomic steering bar, and clever details that simplify your work routine: Each walk-behind scrubber-drier offers outstanding comfort for efficient working days as a standard!

Perfect for every application

From confined areas in restaurants, and narrow aisles and check-out areas in retail shops to hygiene-sensitive areas in hospitals or nursing homes: The demands placed on professional indoor cleaning are as diverse as are the fields of application. With a wide range of optional extras available, our Scrubmaster walk-behind scrubber-driers can be perfectly adapted to meet your individual requirements. And thanks to numerous sophisticated standard features, our scrubber-driers are always the perfect choice for both fleet managers and operators.

More efficiency per m²
The combination of high-quality components and clever details guarantees low operating costs and increased efficiency for friendly cleaning with excellent results.

Back-friendly operation
Hako walk-behind scrubber-driers are ergonomically designed to reduce strain on the operator: with an optimal handle position for fatigue-free working and a good view of the machine and the area being cleaned.

Intuitive operating panel
The clearly arranged operating panel with easy-to-read icons shortens initial training times and provides ease of use. Hako's 1-button operating system starts all cleaning functions at the push of a button (only with Scrubmaster B90 CL).

Flat brush unit
The flat, protruding brush unit is only 10 cm high to ensure perfectly clean floors even under shelves and counters.

Automatic disc brush change
Brush ejection and pick-up made easy: with the automatic Hako disc brush ejection and pick-up system.

Anti-foam system
The flow-optimised design of the tank prevents foam build-up.

Hako-AntiBac®
The optional antibacterial tank coating Hako-AntiBac® reduces the development of fungi and bacteria in the tank.

Hako-AquaControl
The brush system, featuring a water-retention mechanism and an automatic water shut-off when the machine is at a standstill, ensures that water is supplied as required during cleaning operations.

Needs-based dosing
Cleaning chemicals are only used when necessary. Intelligent dosing systems prevent incorrect dosing and ensure reliable cleaning results with only small quantities of chemicals.

Hako Eco Mode
With low levels of soiling, Eco mode adjusts the machine's operation to suit the requirements, thereby reducing both energy consumption and noise levels.

Scrubmaster B75 i

The Scrubmaster B75 i cleans learned routes autonomously, reliably and safely. The 3D camera system and certified LiDAR sensors not only enable efficient navigation, but also compliance with safety standards. Operation and learning new routes are as simple as they are intuitive. Another advantage: For quick cleaning jobs in between, the Scrubmaster B75 i can also be operated manually as a conventional walk-behind scrubber-drier – and is particularly ergonomic thanks to the extendable handle.

Always the right system

Equipped with a disc brush system or cylindrical brush unit and two additional side brooms with Dust Stop for sweeping and wet cleaning in a single cleaning pass.

Boost productivity, reduce effort

The Scrubmaster B75 i carries out cleaning tasks autonomously at any time of the day or night. Even after completing a cleaning run, it can carry out all necessary tasks independently: for example, by navigating to the docking station (which can also be retrofitted) for battery charging, dirty water drainage and fresh water refilling. Optional: The Clean-Guard front shield ensures unhindered cleaning in areas with high levels of coarse dirt.

Technology that learns:

Mapping technologies allow routes to be recorded and stored during the cleaning pass. The machine can be intuitively operated and programmed via an 8-inch touchscreen.

True to track

Autonomous cleaning systems follow the programmed route with high repeat accuracy. This ensures consistent cleaning results and optimised workflows.

Benefits and features at a glance:

- Autonomous driving and cleaning with innovative, image-processing technology
- Simple, intuitive route learning
- Compliance with safety standards
- With disc or cylindrical brush
- Can also be used as a conventional walk-behind scrubber-drier
- Ergonomic in manual operation

Scrubmaster B5

With its innovative Hako-Delta-Cleaning-System®, the Scrubmaster B5 makes even narrow and angled areas accessible for machine-assisted cleaning – with great agility, excellent manoeuvrability and little effort on the part of the operator. The flat, delta-shaped cleaning head enables cleaning close to walls, right into corners and under superstructures and furniture with a floor clearance of as little as 120 mm. And the ergonomic, dynamic operating handle optimally supports the user in his/her movements.

Perfectly shaped
The lithium-ion battery is designed to fit exactly on the delta shape of the brush unit to allow quick and easy battery changing.

DELTA
Cleaning System®

Innovative and unique

Thanks to the patented Hako-Delta-Cleaning-System® with orbital drive, the user can approach even narrow areas precisely and effortlessly, while the neutral propulsion allows him/her to determine the working speed at all times.

All medium-carrying parts, such as the hoses, can be easily replaced and cleaned. And the antibacterial tank coating Hako-AntiBac® makes the cleaning process even more hygienic.

Benefits and features at a glance:

- Innovative Hako-Delta-Cleaning-System® with neutral propulsion
- Ultra-flat, delta-shaped cleaning head for cleaning close to walls and under furniture
- Particularly manoeuvrable and agile
- Award-winning ergonomics: AGR quality label – awarded for particularly back-friendly, fatigue-free working
- Minimal wear on the cleaning tools
- With Silent mode for noise-sensitive areas

Scrubmaster B8 and B12

The Scrubmaster B8 provides excellent results in confined areas that cannot be accessed by conventional scrubber-driers – for example in restaurants, canteens, sanitary facilities, or small shops. With its compact dimensions, 33-cm working width, 2 x 8-litre solution and recovery tank and flexible steering bar, this machine cleans both forwards and backwards with optimum efficiency.

At the push of a button
Easy-to-read symbols ensure intuitive operation.

Lightweight and handy

The Scrubmaster B12 is equipped with a disc brush unit that protrudes on both sides. This enables working close to walls and edges, and saves both time and effort for laborious rework. For perfectly cleaned hard floors with smooth surfaces. This machine is extremely manoeuvrable and can work even in confined, cramped areas. With its low weight and foldable steering bar, the scrubber-drier can be transported in the boot of a car.

Features and benefits at a glance:

- Equipped with a cylindrical (Scrubmaster B8) or disc brush system (Scrubmaster B12)
- 33 or 38 cm working width
- Area output up to 1,500 m²/h
- Low weight, easy to transport
- Foldable steering bar

AI-modified

Scrubmaster B25

The Scrubmaster B25 combines high performance with ease of use in a compact form. With Powerflow drive, an ergonomic design and high operating comfort, the machine effectively supports the user in his/her daily work. The ergonomically shaped, adjustable handle bar enables back-friendly working. With a working width of 43 cm, floors can be cleaned quickly, efficiently and thoroughly with a disc brush or pad.

The operating bar can be quickly adjusted to suit the operator.

Recycled
The solution and recovery tanks are made from 100% post-industrial recyclate, which means recycled plastic that is generated as a by-product during production.

Practical: the optional storage box for cleaning or other utensils and the optional mop holder.

Efficiency right from the start

- Production of the solution and recovery tank from 100% industrial recyclate
- Full functionality with a reduced number of components
- Plastics made from mono-material without metal inserts
- Operation in Eco mode for energy consumption tailored to your needs and reduced noise levels
- With Hako-AquaControl: Water supply tailored to requirements thanks to the brush system with water-retention mechanism and automatic water shut-off when the machine is at a standstill

Scrubmaster B35 and B50

Clean results are achieved where technology, ergonomics and cost-effectiveness come together. The Scrubmaster models B35 and B50 combine proven Hako quality with well-thought-out technical improvements for greater efficiency, safety and comfort in day-to-day use. The intuitive operation, ergonomic features and smart functions assist the user in cleaning medium-sized areas – even when cleaning staff change frequently. At the same time, integration with digital applications supports cost-effective operations.

Scrubmaster B35 – proven technology now with even more tank volume, area output and comfort.

Scrubmaster B50 – optionally available with orbital technology (expected from the end of 2026) for improved cleaning results and reduced brush wear thanks to increased brush stability and cleaning via the brush tips.

Service-friendly in every detail

Maintenance and servicing are quick and require little effort thanks to easily accessible components, the fold-out squeegee and the large tank opening. Whether daily cleaning, regular inspection or replacement of wear parts – every step is intuitive. This means that the machines remain in service longer and deliver reliable results day after day.

Clean: The innovative squeegee design ensures consistently good suction results and quickly leaves floors dry and clean.

Self-explanatory: The clearly arranged control panel with clearly marked membrane buttons makes operation simple and safe.

Safe

Thanks to automatic speed control when cornering, the machine always remains under control – even in tight spaces.

AGR
Aktion Gesunder Rücken e.V.

Benefits and features at a glance:

- Full control and safety thanks to automatic speed regulation when cornering
- Service-friendly design to facilitate daily maintenance work on the machine
- Intuitive and safe operation even with changing cleaning staff
- Body panels made from 50% post-consumer recyclate

Scrubmaster B70, B70 CL and B90 CL

With various working widths available, disc or cylindrical brushes and different battery systems, as well as optional extras and a Standard or CL variant, the Scrubmaster B70 is ideal for thorough, economically efficient scrubbing and drying of medium-sized to large floors, for example in shopping centres and supermarkets, office buildings and local authorities, or production halls and warehouses.

Hako-AntiBac® as standard

The antibacterial treatment of the solution and recovery tanks significantly reduces bacterial and fungal growth on the tank surface. (Scrubmaster B70 CL and B90 CL).

Efficient in every detail

The Scrubmaster B90 CL has been optimised to provide outstanding economic efficiency. Its heavy-duty design with aluminium die cast brush units and squeegees guarantees superior reliability to minimise repair costs and downtimes. Equipped with Hako-AntiBac® providing antibacterial tank properties and Silent-Kit for low-noise working as a standard, the Scrubmaster B90 CL is perfectly suited for working in hygiene-sensitive areas.

Features and benefits at a glance:

- B70 equipped with a disc or cylindrical brush system 60, 65, 75 oder 85 cm working width
- B90 equipped with a disc brush system 85 cm working width
- Area output up to 4,200 m²/h
- Robust heavy-duty design
- Hako-AntiBac® as a standard (only with Scrubmaster B70 CL and B90 CL)
- Silent Mode (only with Scrubmaster B70 CL and B90 CL)

Which machine is the best for your requirements?

Our range of Scrubmaster walk-behind scrubber-driers covers the entire spectrum from small to medium-sized areas. The machines are compared below in terms of their areas of application, area outputs and selected features.

Scrubmaster	B75 i	B5	B8	B12	B25	B35	B50	B70	B90 CL

Optional equipment

Each Scrubmaster can be individually configured to suit the cleaning task at hand: with optimally matched original accessories for greater efficiency, occupational safety or hygienically impeccable results.

For the protection of people and materials

Equipping the solution and recovery tanks with Hako-AntiBac® protects the plastic, reduces the growth of fungi and bacteria in the tank system and reduces odours.

Targeted distribution and extraction

With the handheld suction tool, which can be used both for extracting dirty water and in combination with a spray function.

Quality of life for all through cleanliness and safety

For around 80 years, Hako has been providing innovative machines and services in the Cleaning and Municipal Technology sectors. The company is one of the leading manufacturers of machines for industrial, building and outdoor cleaning, as well as grounds maintenance and winter services. New solutions in the fields of autonomy, electromobility and digitalisation complement the portfolio. Hako stands for high product quality and reliable service. Sustainability requirements are addressed through continuous product and technology development.

We are also active in the Municipal Technology sector

Our flexible, manoeuvrable sweepers and compact, multifunctional implement carriers and municipal vehicles ensure clean and safe public spaces all year round – supported by efficient weed control equipment to maintain a well-kept urban environment.
